The Mensam Stoma Kit

Always have your clean bag and accessories to hand

*Change your stoma bag
hygienically and easily.
At home and on the go.*

Who am I?

My name is Robin Bouten. I am 25 years old and live in Breda, the Netherlands. I first developed the Mensam Stoma Kit in 2019 for my graduation project in Industrial Product Design. Since then I have tested the kit extensively and refined the design with the help of input from 200 bag users.

*Making life with
a stoma easier.*

My story

This product came about because of my dear grandmother. In 2017 she asked me if I could come up with a solution to help her be more mobile despite her stoma. After two years of research, design and testing, I finally developed the Mensam Stoma Kit.

The kit is a simple aid allowing you to change your stoma bag easily and hygienically, wherever you are. The result? My grandmother is far more independent now and I am delighted that we can offer not just her, but all bag users, this great solution.

Hygiene and convenience on the go

About 700,000 people in Europe have a stoma and should be able to change their bags in any public toilet. But how can they do that in a hygienic way? And where do they leave their used bags?

Because it acts as a portable work surface, the Mensam Stoma Kit means that you can change your bag hygienically using both hands. So it keeps the routine chores of living with a stoma as convenient and clean as possible. Our aim is to make your life easier by helping you be more mobile.

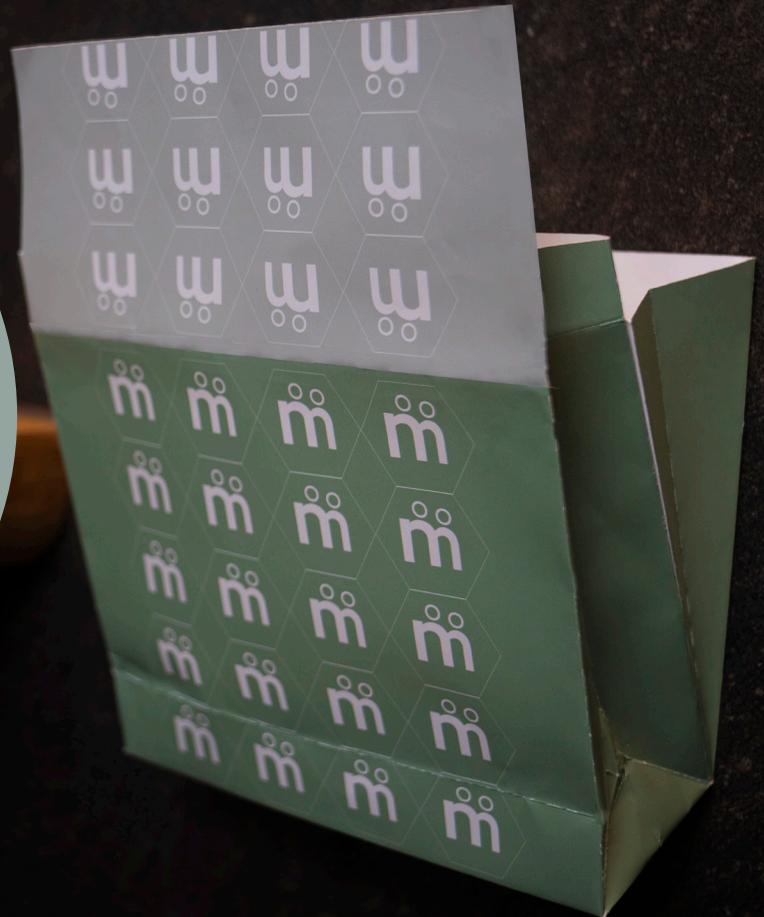

How does it work?

With the Mensam Stoma Kit, you always have your clean bag and accessories to hand. Simply unfold the pouch in any room to form a work surface. You then have two hands free for changing. Afterwards, you can discreetly dispose of your used bag inside the sealed pouch.
